

Current Connections: June 2026

June arrives with longer days and a clear stretch of the year ahead — a checkpoint to assess where we've been and sharpen focus on where we're going. As the first half closes, this month is about capitalizing on the ground we've gained, tightening execution, and keeping our teams aligned and energized through the heat of summer. Success is sustained through consistency, communication, and the discipline to follow through when it matters most. We're carrying that momentum into June with purpose, precision, and the drive to finish the half strong.

Inside H&W University — and What Our Investment in Training Means for Your Project

Mason Dillard

Director of Systems & Education

A design-build project is only as reliable as the people who install it. At H&W Electrical, we develop those people in-house through H&W University, our training program for the helpers, electricians, and field leaders who execute your electrical scope. This year we completed a significant overhaul of the curriculum and graduated our 2026 cohort: 19 employees who are better equipped, more accountable, and ready to advance.

H&W University trains every participant to hold three perspectives at once — think like a designer, think like an engineer, and think like a builder. Together, these form the design-build mindset, and we carry it across every role that touches your project, from business development through engineering, to the office, to the field. Everyone is aligned to the same outcome before the first conduit is bent.

The result is a workforce uniquely equipped for the demands of industrial and medium-voltage work. Our crews are adaptable — they troubleshoot on the spot and know when and who to escalate to, so you get faster answers. They deliver higher quality, executing installations right the first time, to NEC and your specifications. And they are trustworthy, producing a final product you can stand behind. This mindset is not limited to design-build contracts — on plan-and-spec work, the same approach keeps your electrical scope moving efficiently and reduces the surprises that drive change orders and delays.

We invest in our people because the strength of your installation outlives the schedule. The crews we train today are the standard your facility runs on for decades. We begin with the end in mind — and that end starts five years from now.

PROJECT PROFILE: ENGINEERED PRODUCTS

Project Manager: Mike Fogarty

H&W has successfully completed the original contract scope on the Engineered Products project. Our team is now working alongside the general contractor and client to support process equipment installation, commissioning activities, and project closeout — all of which are progressing on schedule.

These collaborative efforts reflect H&W's commitment to seeing projects through beyond the finish line, and we look forward to a full project completion by the end of July.
