Current Connections: September 2026

September marks a natural inflection point—summer's intensity behind us, fall's steadier pace ahead. As we enter the final quarter of the year, our teams across the Southeast continue to deliver the skilled, safety-conscious work that defines H&W. These next months will test our planning, coordination, and commitment to excellence as project schedules compress and weather patterns shift. By supporting one another through tighter timelines, and staying true to our safety-first approach, we're positioning ourselves for a strong close to 2026.

Building the Blueprint Together: How Teamwork and Engineering Power Our Projects

Randy Birch

Vice President of Engineering

When people think of an electrical contractor, they usually picture wire nuts, conduits, and hard hats. But long before our field crews hit the job site, our biggest wins happen in the conference room and behind the computer screens.

As a design-build electrical contractor leading the Southeast, our true superpower isn’t just our tools—it’s our people, bringing their individual strengths together from day one.

Engineering: The Engine Behind Every Team

Engineering isn't an isolated department; it's the connective tissue across our entire process. Our engineers jump in at every stage to make everyone else's job easier:

- Partnering with Estimating Upfront: Before we even sign a contract, engineering works hand-in-hand with our estimators to review project specs, catch code traps, and build accurate, competitive budgets that de-risk massive projects.
- Collaborating with General Contractors: We partner directly with GCs during the design phase to align budget and buildability, finding smart, cost-effective ways to deliver top-tier performance without inflating project costs.
- Beating Lead Times: With major equipment delays plaguing the industry, our team proactively specifies alternative, high-quality gear early on—keeping gear arriving on schedule and job sites moving.

Bringing Out the Best in Every Coworker

Every single project relies on a seamless relay race of specialized talent:

- The BIM & 3D Revit Crew: They model the building digitally in 3D to resolve trade collisions with ductwork or plumbing long before metal hits the dirt.
- The Layout Techs: Using Trimble surveying technology, they transfer those 3D coordinates straight to the slab, marking layout points with pinpoint accuracy.
- The Project Managers: PMs take the plans, line up materials, manage budgets, and keep communication flowing smoothly across all teams.

Supporting the Installers Who Make Us Great

Engineering plans aren't meant to sit on a desk—they’re built to set up our field crews for victory. Our engineers and project managers work closely with our installers, walking through detailed drawings, educating on complex runs, and ensuring everyone has what they need to build safely and efficiently.

It takes every coworker playing to their strengths—from estimating and design to management and field installation—to keep us building the best projects in the Southeast.

PROJECT PROFILE: SHAMROCK

Project Manager: Dustin Anthony

H&W Electrical is beginning comprehensive power and controls work on an industrial facility project. Our team will design and install power distribution for a chiller unit and multiple reactors, along with their associated control and auxiliary devices. We'll also be installing extensive cable tray infrastructure throughout the facility and within the electrical room, ensuring organized, code-compliant routing that supports both immediate needs and future system expansion.

This project brings together our mechanical, electrical, and controls expertise—the kind of integrated work that showcases H&W's capability to manage complex, multi-system installations from start to finish.
